

# Installation of LED Lighting Kit

**NOTE:** A LICENSED electrician is recommended for installation. Installation may vary depending on sign manufacuere and layout.

**1:** Turn the power off to your sign. (Lock out tag out)

**2:** Open signage, and locate original ballast, disconnect power from ballast. (Sign raceway may be covering ballast wiring.)

**3:** Remove fluorescent bulbs. Removal of the fluorescent sockets is not needed.

**4:** install LED Light Bar brackets above or below original fluorescent sockets. Once brackets are installed mount your new LED bars to these brackets. (Reference image 2B)

**5:** Install the power supply provided in your LED Kit and run wiring to your new LED bars. Be sure to split the power evenly between power supplies if you are provided multiple power supplies. (You do not need to run the new wiring under the original raceway but it is suggested.)
